

NLP Lab: Autogen

Progress Update 07.06.24

What was done

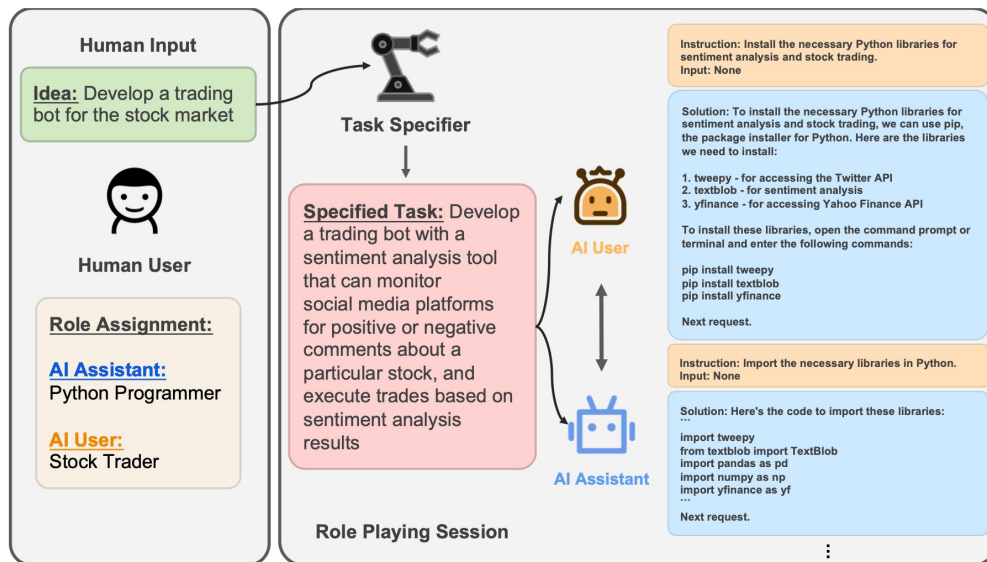

Demos are deployed at <http://130.162.48.238:8080/>

Streamlit demos:

- Added several agents to further enable overarching agent functionality
 - DALLE Agent
 - Browser search using Google Search API
 - Simple multimodal chat
 - [WiP] PDF parsing (turned out to be more complex than expected)
- UI improvement
 - Messages can now displayed as separate bubbles

Problems

- CAMEL paper similar idea? Role-playing VS Multi-agent Setting
- So far not any comparisons. How to compare?
- Conversable and in a loop of interaction, thus stream of the conversation.

Next steps

- Make UI interactive (try Websockets?)
- Complete the work on PDF parsing
- Overarching agent
- Further search for additional experiments
- Online browsing experiment is in progress
